From Food Scarcity to Surplus

Innovations in Indian, Chinese and Israeli Agriculture

Springer Nature This book brings together unique experiences of India, China and Israel in overcoming economic, social, and natural resource challenges. Through its eleven chapters, the book captures the role of groundbreaking innovations in achieving unprecedented agricultural growth and stabilizing these nations. It provides a future outlook of the new challenges that will confront these countries in 2030 and beyond, related to tackling food and nutrition security, sustainable agricultural growth and adhering to improved food safety standards. This book provides useful insights for exploring technological innovations and policies that can address these future challenges and develop profitable and sustainable agriculture. This volume also highlights valuable lessons that India, China and Israel provide for the rest of the developing world where population is growing fast; natural resources are limited; and it is a challenge to produce enough food, feed and fibre for their populations. Tracing the historical past, this book is an impressive resource for academicians, policymakers, practitioners, agribusiness players, entrepreneurs in understanding the role of innovations in addressing future challenges.

Seawater Reverse Osmosis Desalination

Assessment & Pre-treatment of Fouling and Scaling

IWA Publishing This textbook covers the fundamentals of fouling and scaling in reverse osmosis systems. It includes theory and practice of pre-treatment, fouling and scaling in reverse osmosis applied for drinking and industrial water production. The impact of the water source - seawater, river water, brackish groundwater and (treated domestic) waste water - will be discussed in depth. The book presents the knowledge and experience gained at IHE Delft over the last 25 years during the implementation of the master programme in Water Supply Engineering and during the implementation of state-of-the-art research in understanding and solving operational problems in full scale desalination plants. It presents the expert knowledge of IHE Delft in the areas of pre-treatment for reverse osmosis systems, assessment of water quality with respect to fouling potential, development of methods for quality assessment, modified fouling index ultrafiltration at constant flux, transparent exopolymer particles, antiscalant dose optimization, biological growth potential, algal blooms, scaling control. The book will be used in the annual master programme at IHE Delft and it will be of interest for students, academics, engineers and managers in drinking water facilities all over the world.
