Educating the Student Body

Taking Physical Activity and Physical Education to School

National Academies Press Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

Access To Academics for All Students

Critical Approaches To Inclusive Curriculum, Instruction, and Policy

Routledge The authors of this book join a growing number of voices calling for teachers in diverse, inclusive schools to move beyond facilitating social participation in classroom activities and consider ways to intellectually engage ALL learners. They draw on emerging work linking critical theory with disability issues; work being done in curriculum studies around issues of social justice teaching, authentic instruction, service learning, and critical pedagogy; and the movement in the field of special education away from a deficit-driven model of education to an orientation that values students' strengths and gifts. *Access to Academics for ALL Students: Critical Approaches to Inclusive Curriculum, Instruction, and Policy*: *examines the perceptions teachers hold about students with disabilities, students who are racially and ethnically diverse, students using English as a second language, students labeled "at risk," students placed in both "high" and "low" academic tracks, and students in urban schools; *highlights how students who traditionally have been denied access to challenging work and educational opportunities can be supported to participate in academic instruction; and *provides ideas for recognizing and challenging inequities, offers a framework for fostering access to academics for students with a range of strengths and needs, and explores pragmatic ways of increasing academic success for all learners. This volume is appropriate for both undergraduate and master's level courses in curriculum and instruction, methods of teaching (special and general education), inclusive education, multicultural education, and cultural foundations of education. It will serve as a resource for elementary and secondary teachers, for school administrators, and for parents.

Changing the Grade

A Step-by-Step Guide to Grading for Student Growth

ASCD Many educators agree that the 100-point grading model is not always a reliable way to evaluate student learning. But is there another way to more accurately and equitably grade students and provide high-quality information to parents while fostering student learning? If so, why haven't school districts across the country changed their practices? In Changing the Grade, author and educator Jonathan Cornue presents a detailed model for developing a more reliable, standards-based grading system—including 30 steps to guide you through the process. In addition to identifying and addressing the barriers to change—such as concerns about how colleges and employers will interpret an alternative grading model—Cornue offers a concrete structure for changing the grading system, providing guidance on: • Thinking in a new way about why grades are given and the purpose of a report card grade; • Identifying what needs to be changed and what actions must be taken to facilitate the change; • Building a team of stakeholders—including teachers, principals, and guidance counselors—to lead the change process; • Developing the new standards-based grading structure; • Designing standards-based assignments and assessments that align with a new grading structure; • Avoiding grade inflation; and • Getting buy-in from teachers and other staff members, principals, administrators, the board of education, and the community by demonstrating that the change process is intentional, research-based, student-focused, and permanent. The book also includes helpful samples of standards-based gradebooks, homework assignments, rubrics, and report cards. If you are interested in making a systemic and systematic shift to a high-quality grading structure that is far less subjective than many commonly found in schools, consider Changing the Grade.

Putting Research to Work in Elementary Physical Education

Conversations in the Gym

Human Kinetics - Features 30 clear summaries of studies on elementary physical education instruction, class management, program design, workplace conditions, and more - Includes practical tips for navigating the typical research report to improve the ability of teachers to glean new ideas and useful facts from research - Shows the differences between the vantage point of the researcher and that of the teaching practitioner, and how to find the common ground between the two - Covers new teaching strategies, measuring instruments, and program alternatives--and how to think about teaching physical education in more sophisticated ways This textbook and reference provides teachers with valuable insights for using research to improve their teaching. Putting Research to Work in Elementary Physical Education: Conversations in the Gym lets readers eavesdrop on a career-long conversation between a well-known scholar and a top-notch teacher who have a combined 75 years of professional physical education experience. Together they take a close look at 30 studies to help educators learn how to glean valuable information from research. The book opens a window into the minds of 69 scholars as they puzzle about teachers, students, and programs. Readers do not need a highly technical vocabulary, advanced scientific or mathematical knowledge, or a detailed background concerning research methods. The authors have provided "translations" in the form of brief, nontechnical annotations that teachers and other nonresearchers will actually enjoy reading. Each study is briefly described and then commented on from a researcher's perspective, a teacher's perspective, and finally, a shared perspective. The 30 reports address important, practical issues recognizable to anyone familiar with what happens in a physical education class. The book shows how the studies can be useful to teachers in their own work, and it points out how valuable information from research can be used to improve teaching. The book also demonstrates how stimulating and fruitful dialogue can be when the knowledge of researchers and practitioners is brought together around a single study. By discussing each study from both perspectives, the book sheds light on the common ground between researchers and physical educators and fosters mutual respect between the two. The varied perspectives can also provide a valuable springboard for thought-provoking discussions among colleagues in a school setting or in a graduate-level physical education course. The book presents 12 guidelines that will help readers navigate through the difficult aspects of the typical research report, plus four annotated bibliographies to help readers explore topics that are more specific and more advanced. No other resource makes such a diverse group of studies so accessible. If educators are to put research to work in their own teaching methods and program designs, there's no better place to start than with these straightforward "conversations in the gym."

Resources in Education

The Funding of School Education

Connecting Resources and Learning

OECD This report on the funding of school education constitutes the first in a series of thematic comparative reports bringing together findings from the OECD School Resources Review. School systems have limited financial resources with which to pursue their objectives and the design of school funding policies plays a key role in ensuring that resources are directed to where they can make the most difference. As OECD school systems have become more complex and characterised by multi-level governance, a growing set of actors are increasingly involved in financial decision-making. This requires designing funding allocation models that are aligned to a school system's governance structures, linking budget planning procedures at different levels to shared educational goals and evaluating the use of school funding to hold decision makers accountable and ensure that resources are used effectively and equitably. This report was co-funded by the European Commission.
