PAR involves collaborative research, education and action which is oriented towards social change, representing a major epistemological challenge to mainstream research traditions. It has recently been the subject of heated critique and debate and rapid theoretical and methodological development. This book captures these developments, exploring the justification, theorisation, practice and implications of PAR. It offers a critical introduction to understanding and working with PAR in different social, spatial and institutional contexts. The authors engage with PAR's radical potential, while maintaining a critical awareness of its challenges and dangers. The book is divided into three parts. The first part explores the intellectual, ethical and pragmatic contexts of PAR; the development and diversity of approaches to PAR; recent poststructuralist perspectives on PAR as a form of power; the ethic of participation; and issues of safety and well-being. Part two is a critical exploration of the politics, places and practices of PAR. Contributors draw on diverse research experiences with differently situated groups and issues including environmentally sustainable practices, family livelihoods, sexual health, gendered experiences of employment, and specific communities such as people with disabilities, migrant groups, and young people. The principles, dilemmas and strategies associated with participatory approaches and methods including diagramming, cartographies, art, theatre, photovoice, video and geographical information systems are also discussed. Part three reflects on how effective PAR is, including the analysis of its products and processes, participatory learning, representation and dissemination, institutional benefits and challenges, and working between research, action, activism and change. The authors find that a spatial perspective and an attention to scale offer helpful means of negotiating the potentials and paradoxes of PAR. This approach responds to critiques of PAR by highlighting how the spatial politics of practising participation can be mobilised to create more effective and just research processes and outcomes. The book adds significant weight to the recent critical reappraisal of PAR, suggesting why, when, where and how we might take forward PAR's commitment to enabling collaborative social transformation. It will be particularly useful to researchers and students of Human Geography, Development Studies and Sociology. **Overlooking the Visual Demystifying the Art of Design Routledge** Making tangible connections between theory and practice, ideas and form, this book encourages debate about the artistic, conceptual, and cultural significance of the way things look. What are the metaphysical concepts at the heart of design education, theory, and philosophy? Why do we assume that design is impossible to teach? This book challenges the traditional foundations of perception and takes an imaginative, radical approach, setting itself apart from the traditions of analytical philosophy, evolutionary psychology, and phenomenology which underpin much of current design theory and discourse. The new definition of perception produces startling consequences for conceptions of language, intelligence, meaning, the senses, emotions and subjectivity. This is an innovative, fresh view on design and how we can improve it for both practitioners and students in the architecture and design fields as well as philosophers. **Human Geography People, Place, and Culture 9th Edition with Human Geography in Action 4th Edition and WileyPLUS 9th Edition Set Human Geography People, Place, and Culture John Wiley & Sons** Human Geography gets general readers to think geographically across scale and across a wide range of geographical phenomena and global issues. Considering each of the subject's primary subfields in turn, it addresses developments in both continental European and Anglo-American geography, providing a cutting-edge evaluation of each. Written clearly and accessibly by leading researchers, the book combines historical astuteness with personal insights and draws on a range of theoretical positions. A central theme of the book is the relative decline of the traditional subdisciplines towards the end of the twentieth century, and the continuing movement towards interdisciplinarity in which the various strands of human geography are seen as inextricably linked. This stimulating and exciting new book provides a unique insight into the study of geography during the twentieth century, and is essential reading for anyone studying the history and philosophy of the subject. *Methods in Human Geography A guide for students doing a research project* *Routledge* First published in 2004. This text is an essential guide to current research approaches in human geography, covering all aspects of undertaking a geography research project, from the selection of an appropriate topic through to the organisation and writing of the final report. From the plastics littering our seas, to the role of climate change on ocean currents from unequal access of marine resources to the treacherous experiences of seafarers who keep our global economy afloat; now is a crucial time to examine how we live with the sea. This ambitious book brings together an interdisciplinary and international cohort of contributors from within and beyond academia. It offers a range and diversity of insights unlike previous collections. An 'oceanic turn' is taking place, with a burgeoning of academic work that takes seriously the place of seas and oceans in understanding socio-cultural and political life, past and present. Yet, there is a significant gap concerning the ways in which we engage with seas and oceans, with a will to enliven action and evoke change. This book explores these challenges, offering insights from spatial planning, architectural design, geography, educational studies, anthropology and cultural studies. An examination through these lenses can help us to better understand human relationships with the seas and oceans, and promote an ethic of care for the future. *Knowledge and Action* *Springer* This volume explores interdependencies between knowledge, action, and space from different interdisciplinary perspectives. Some of the contributors discuss knowledge as a social construct based on collective action, while others look at knowledge as an individual capacity for action. The chapters contain theoretical frameworks as well as experimental outcomes. Readers will gain insight into key questions such as: How does knowledge function as a prerequisite for action? Why are knowledge gaps growing and not diminishing in a knowledge society? How much knowledge is necessary for action? How do various types of knowledge influence the steps from cognition to action? How do different representations of knowledge shape action? What impact have spatial conditions for the formation of knowledge? What is the relationship between social and geographical space? The contributors consider rationality in social and economic theories as well as in everyday life. Attention is also given to action theoretic approaches and rationality from the viewpoints of psychology, post-structuralism, and human geography, making this an attractive book for students, researchers and academics of various backgrounds. *Remaking Human Geography* *Routledge* This book highlights the increasingly important contribution of geographical theory to the understanding of social change, values, economic & political organization and ethical imperatives. As a cohesive collection of chapters from well-known geographers in Britain and North America, it reflects the aims of the contributors in striving to bridge the gap between the historical-materialist and humanist interpretations of human geography. The book deals with both the contemporary issues outlined above and the situation in which they emerge: industrial restructuring, planning, women's issues, social and cultural practices and the landscape as context for social action.
