PHILOSOPHY IN CLASSROOMS AND BEYOND

NEW APPROACHES TO PICTURE-BOOK PHILOSOPHY

Rowman & Littlefield Publishers The contributors to this volume describe a range of programs that use picture books to teach philosophy to diverse audiences. From a pre-school program in which college students do the teaching to a program focused on overcoming the legacy of violence and genocide in Mali in which the teachers write and illustrate their own picture books, the authors demonstrate the impact that learning philosophy has on diverse communities of young students and their teachers.

PHILOSOPHICAL TOPICS

University of Arkansas Press

UNIFYING THE PHILOSOPHY OF TRUTH

Springer This anthology of the very latest research on truth features the work of recognized luminaries in the field, put together following a rigorous refereeing process. Along with an introduction outlining the central issues in the field, it provides a unique and unrivaled view of contemporary work on the nature of truth, with papers selected from key conferences in 2011 such as Truth Be Told (Amsterdam), Truth at Work (Paris), Paradoxes of Truth and Denotation (Barcelona) and Axiomatic Theories of Truth (Oxford). Studying the nature of the concept of 'truth' has always been a core role of philosophy, but recent years have been a boom time in the topic. With a wealth of recent conferences examining the subject from various angles, this collection of essays recognizes the pressing need for a volume that brings scholars up to date on the arguments. Offering academics and graduate students alike a much-needed repository of today's cutting-edge work in this vital topic of philosophy, the volume is required reading for anyone needing to keep abreast of developments, and is certain to act as a catalyst for further innovation and research.

INTRODUCTION TO THE PHILOSOPHY OF SCIENCE

Hackett Publishing A reprint of the Prentice-Hall edition of 1992. Prepared by nine distinguished philosophers and historians of science, this thoughtful reader represents a cooperative effort to provide an introduction to the philosophy of science focused on cultivating an understanding of both the workings of science and its historical and social context. Selections range from discussions of topics in general methodology to a sampling of foundational problems in various physical, biological, behavioral, and social sciences.

Each chapter contains a list of suggested readings and study questions.

ANALYTIC PHILOSOPHY WITHOUT NATURALISM

Routledge In recent years numerous attempts have been made by analytic philosophers to naturalize various different domains of philosophical inquiry. All of these attempts have had the common goal of rendering these areas of philosophy amenable to empirical methods, with the intention of securing for them the supposedly objective status and broad intellectual appeal currently associated with such approaches. This volume brings together internationally recognised analytic philosophers, including Alvin Plantinga, Peter van Inwagen and Robert Audi, to question the project of naturalism. The articles investigate what it means to naturalize a domain of philosophical inquiry and look at how this applies to the various sub-disciplines of philosophy including epistemology, metaphysics and the philosophy of the mind. The issue of whether naturalism is desirable is raised and the contributors take seriously the possibility that excellent analytic philosophy can be undertaken without naturalization. Controversial and thought-provoking, *Analytic Philosophy Without Naturalism* examines interesting and contentious methodological issues in analytic philosophy and explores the connections between philosophy and science.

ON PHILOSOPHY AND PHILOSOPHERS

UNPUBLISHED PAPERS, 1960-2000

Cambridge University Press "Philosophers suffer from a peculiar occupational hazard; people are always coming up and asking them just what it is that they do and how they do it. This is not the sort of question that biologists or economists or musicians get asked; people know, pretty well, what they do, and they may or may not be interested in the details. But a philosopher is different - it is very hard to imagine just what he does with his time"--

ESSAYS IN ANCIENT GREEK PHILOSOPHY IV

ARISTOTLE'S ETHICS

SUNY Press Papers originally presented at the annual meetings of the Society for Ancient Greek Philosophy. Seventeen essays demonstrate a shared and strikingly high regard for Plato as a major thinker in the western philosophical tradition, a recognition that the dialogues he wrote continue to exert influence as well as attract theoretical attention. Paper edition (\$18.95) not seen. The essays in this collection have been selected from a much larger set of papers on Aristotle's ethics, presented before the Society for Ancient Greek Philosophy during the past decade. The essays are arranged (roughly) according to several unifying themes: methodology, ergon, virtue and character, moral reasoning, and persons and property. Annotation copyrighted by Book News, Inc., Portland, OR

GRETE HERMANN - BETWEEN PHYSICS AND PHILOSOPHY

Springer Grete Hermann (1901-1984) was a pupil of mathematical physicist Emmy Noether, follower and co-worker of neo-Kantian philosopher Leonard Nelson, and an important intellectual figure in post-war German social democracy. She is best known for her work on the philosophy of modern physics in the 1930s, some of which emerged from intense discussions with Heisenberg and Weizsäcker in Leipzig. Hermann's aim was to counter the threat to the Kantian notion of causality coming from quantum mechanics. She also discussed in depth the question of 'hidden variables' (including the first critique of von Neumann's alleged impossibility proof) and provided an extensive analysis of Bohr's notion of complementarity. This volume includes translations of Hermann's two most important essays on this topic: one hitherto unpublished and one translated here into English for the first time. It also brings together recent scholarly contributions by historians and philosophers of science, physicists, and philosophers and educators following in Hermann's steps. Hermann's work places her in the first rank among philosophers who wrote about modern physics in the first half of the last century. Those interested in the many fields to which she contributed will find here a comprehensive discussion of her philosophy of physics that places it in the context of her wider work.

THE BLACKWELL GUIDE TO THE PHILOSOPHY OF LANGUAGE

John Wiley & Sons The Blackwell Guide to Philosophy of Language is a collection of twenty new essays in a cutting-edge and wide-ranging field. Surveys central issues in contemporary philosophy of language while examining foundational topics Provides pedagogical tools such as abstracts and suggestions for further readings Topics addressed

include the nature of meaning, speech acts and pragmatics, figurative language, and naturalistic theories of reference

PHILOSOPHY

A GUIDE TO THE REFERENCE LITERATURE

Libraries Unlimited A newly reorganized, up-to-date overview of key reference works in philosophy published over the past decade.

NEW ESSAYS IN POLITICAL AND SOCIAL PHILOSOPHY

Cambridge University Press Whether it is a result of nature, the consequence of a choice to escape the state of nature, or the outcome of some other process of deliberation, the fact of human association gives rise to recurrent themes in political and social philosophy. The character and requirements of justice, the profile of political legitimacy, and the relationship between the powers of government and the rights of the governed are some of the subjects of ongoing consideration and debate in the disciplines of philosophy, political theory, economics, and law. This volume represents a contribution to the investigation of these issues of perennial interest and import, featuring essays whose authors hope to extend, deepen, and, in some cases, move in new directions, the current state of discussion.

ESSAYS ON PHILOSOPHY IN AUSTRALIA

Springer Science & Business Media Philosophy flourished in Australia after the war. There was spectacular growth in both the number of departments and the number of philosophers. On top of this philosophy spread beyond the philosophy departments. Serious studies, and interest in philosophy is now common in faculties as diverse as law, science and education. Neither is this development merely quantitative, the Australian researcher has come of age and contributes widely to international debates. At least one movement originated in Australia. This makes the study of philosophy in Australia timely, evidenced by the number of articles concerned with this area that begin to appear in international journals. In Australia itself there is growing interest in the history of the country's philosophical development. There are discussions in conferences and meetings: the matter is now the subject of courses.

UGC NET PHILOSOPHY PAPER II CHAPTER WISE NOTEBOOK | COMPLETE PREPARATION GUIDE

EduGorilla Community Pvt. Ltd. • Best Selling Book in English Edition for UGC NET Philosophy Paper II Exam with objective-type questions as per the latest syllabus given by the NTA. • Increase your chances of selection by 14X. • UGC NET Philosophy Paper-II Kit comes with well-structured Content & Chapter wise Practice Tests for your self-evaluation • Clear exam with good grades using thoroughly Researched Content by experts.

THE PHILOSOPHY OF SCIENCE

Psychology Press The first in-depth reference in the field that combines scientific knowledge with philosophical inquiry, The Philosophy of Science: An Encyclopedia is a two-volume set that brings together an international team of leading scholars to provide over 130 entries on the essential concepts in the philosophy of science. The areas covered include: biology chemistry epistemology and metaphysics physics psychology and mind the social sciences key figures in the combined studies of science and philosophy. The essays represent the most up-to-date philosophical thinking on timeless scientific topics such as: determinism, explanation, laws of nature, perception, individuality, time, and economics as well as timely topics like adaptation, conservation biology, quantum logic, consciousness, evolutionary psychology, and game theory.

DOING PHILOSOPHY

A GUIDE TO THE WRITING OF PHILOSOPHY PAPERS

This brief text is designed to assist students with no previous formal background in writing philosophy papers. Contents includes topic selection, outlines and drafts, proper and improper quotation, argument development and evaluation, principles of good writing, style and logic.

THE OXFORD HANDBOOK OF PHILOSOPHY OF DEATH

Oxford University Press Death has long been a pre-occupation of philosophers, and this is especially so today. The Oxford Handbook of Philosophy of Death collects 21 newly commissioned essays that cover current philosophical thinking of death-related topics across the entire range of the discipline. These include metaphysical topics--such as the nature of death, the possibility of an afterlife, the nature of persons, and how our thinking about time affects what we think about death--as well as axiological topics, such as whether death is bad for its victim, what makes it bad to die, what attitude it is fitting to take towards death, the possibility of posthumous harm, and the desirability of immortality. The contributors also explore the views of ancient philosophers such as Aristotle, Plato and Epicurus on topics related to the philosophy of death, and questions in normative ethics, such as what makes killing wrong when it is wrong, and whether it is wrong to kill fetuses, non-human animals, combatants in war, and convicted murderers. With chapters written by a wide range of experts in metaphysics, ethics, and conceptual analysis, and designed to give the reader a comprehensive view of recent developments in the philosophical study of death, this Handbook will appeal to a broad audience in philosophy, particularly in ethics and metaphysics.

A COMPANION TO LATIN AMERICAN PHILOSOPHY

John Wiley & Sons This comprehensive collection of original essays written by an international group of scholars addresses the central themes in Latin American philosophy. Represents the most comprehensive survey of historical and contemporary Latin American philosophy available today Comprises a specially commissioned collection of essays, many of them written by Latin American authors Examines the history of Latin American philosophy and its current issues, traces the development of the discipline, and offers biographical sketches of key Latin American thinkers Showcases the diversity of approaches, issues, and styles that characterize the field

FIRST PHILOSOPHY

FUNDAMENTAL PROBLEMS AND READINGS IN PHILOSOPHY

Broadview Press This introductory anthology brings together forty-eight readings on eight topics central to philosophy. Mindful of the intrinsic difficulty of much of the material, the editor has provided comprehensive introductions both to the eight topics and to each individual selection. By providing a detailed discussion of the historical and intellectual background to each piece, he aims to enable readers to approach the material without unnecessary barriers to understanding. The topics—from "Does God exist?" to "Do we have free will?" and "What is justice?"—have been chosen with a view both to their philosophical importance and to their interest to the first-year student. In an introductory chapter, the editor provides a brief introduction to the nature of philosophical enquiry, to the nature of argument, and to the process of reading and writing within the academic discipline of philosophy.

FIRST PHILOSOPHY III: GOD, MIND, AND FREEDOM

FUNDAMENTAL PROBLEMS AND READINGS IN PHILOSOPHY

Broadview Press First Philosophy: God, Mind, and Freedom brings together classic and ground-breaking readings on metaphysics, the philosophy of mind, and the philosophy of religion. Mindful of the intrinsic difficulty of much of the material, the editor has provided comprehensive introductions both to the central topics and to each individual selection. By providing a detailed discussion of the historical and intellectual background to each piece, he aims to enable readers to approach the material without unnecessary barriers to understanding. In an introductory chapter, the editor provides a brief introduction to the nature of philosophical enquiry, to the nature of argument, and to the process of reading and writing within the academic discipline of philosophy.

THE BLACKWELL COMPANION TO PHILOSOPHY

John Wiley & Sons This fully revised and updated edition of Nicholas Bunnin and E.P. Tsui-James' popular introductory philosophy textbook brings together specially-commissioned chapters from a prestigious team of scholars writing on each of the key areas, figures and movements in philosophy.

CONNECTIONISM AND THE PHILOSOPHY OF MIND

Springer Science & Business Media This series will include monographs and collections of studies devoted to the investigation and exploration of knowledge, information and data processing systems of all kinds, no matter whether human, (other) animal, or machine. Its scope is intended to span the full range of interests from classical problems in the philosophy of mind and philosophical psychology through issues in cognitive psychology and sociobiology (concerning the mental capabilities of other species) to ideas related to artificial intelligence and to computer science. While primary emphasis will be placed upon theoretical, conceptual and epistemological aspects of these problems and domains, empirical, experimental and methodological studies will also appear from time to time. One of the most, if not the most, exciting developments within cognitive science has been the emergence of connectionism as an alternative to the computational conception of the mind that tends to dominate the discipline. In this volume, John Tienson and Terence Horgan have brought together a fine collection of stimulating studies on connectionism and its significance. As the Introduction explains, the most pressing questions concern whether or not connectionism can provide a new conception of the nature of mentality. By focusing on the similarities and differences between connectionism and other approaches to cognitive science, the chapters of this book supply valuable resources that advance our understanding of these difficult issues. J.H.F.

PHILOSOPHY AND CLIMATE SCIENCE

Cambridge University Press A comprehensive and accessible introduction, as well as an original contribution, to the main philosophical issues raised by climate science.

ESSAYS IN ANCIENT GREEK PHILOSOPHY I

State University of New York Press

LINGUISTICS MEETS PHILOSOPHY

Cambridge University Press With input from a team of scholars, this book brings together linguistics and philosophy, empowering new conversations in the process.

ERNEST NAGEL: PHILOSOPHY OF SCIENCE AND THE FIGHT FOR CLARITY

Springer Nature This volume is dedicated to the life and work of Ernest Nagel (1901-1985) counted among the influential twentieth-century philosophers of science. Forgotten by the history of philosophy of science community in recent years, this volume introduces Nagel's philosophy to a new generation of readers and highlights the merits and originality of his works. Best known in the history of philosophy as a major American representative of logical empiricism with some pragmatist and naturalist leanings, Nagel's interests and activities went beyond these limits. His career was marked with a strong and determined intention of harmonizing the European scientific worldview of logical empiricism and American naturalism/pragmatism. His most famous and systematic treatise on, *The Structure of Science*, appeared just one year before Thomas Kuhn's even more renowned, *The Structure of Scientific Revolutions*. As a reflection of Nagel's interdisciplinary work, the contributing authors' articles are connected both historically and systematically. The volume will appeal to students mainly at the graduate level and academic scholars. Since the volume treats historical, philosophical, physical, social and general scientific questions, it will be of interest to historians and philosophers of science, epistemologists, social scientists, and anyone interested in the history of analytic philosophy and twentieth-century intellectual history.

VIRTUOUS THOUGHTS: THE PHILOSOPHY OF ERNEST SOSA

Springer Science & Business Media This collection is a major contribution to the understanding and evaluation of Ernest Sosa's profound and wide-ranging philosophy, in epistemology and beyond. A balanced, fair and critical volume, it offers a sensitive appreciation of his wide philosophical purview, a nuanced assessment of the detail of his thought, and a spur to exploring the linkages between the varied topics explored by the subtle mind of this great American scholar. The papers explore a wealth of Sosa's academic interests, including his work on philosophical method, the philosophy of mind and language, metaphysics, and value theory, in addition to his output on epistemology itself. It offers, for example, a rebuttal of the counterarguments to Sosa's reliabilist theory of introspective justification, which itself concludes with some objections to Sosa's stated views on the 'speckled hen' problem. Other authors track the connections of his virtue theory to his advocacy of bi-level epistemology, provide reflections on Sosa's views on the epistemological tradition, and examine the nexus of his beliefs on intuition and philosophical methodology. This volume is an insightful reckoning of Sosa's academic account.

THE LOOKER-ON: A PERIODICAL PAPER, BY THE REV. SIMON OLIVE-BRANCH [W. ROBERTS AND OTHERS].

WRITING PHILOSOPHY PAPERS

Wadsworth Publishing Company For students who already know the basics of writing college papers in general, this textbook focuses on the kinds of papers most often assigned in philosophy classes. It addresses such questions of organization, documentation, research, and writing styles. Annotation (c) Book News, Inc., Portland, OR (booknews.com).

MODELS AND METHODS IN THE PHILOSOPHY OF SCIENCE: SELECTED ESSAYS

Springer Science & Business Media The thirty-one papers collected in this volume represent most of the articles that I have published in the philosophy of science and related foundational areas of science since 1970. The present volume is a natural successor to *Studies in the Methodology and Foundations of Science*, a collection of my articles published in 1969 by Reidel (now a part of Kluwer). The articles are arranged under five main headings. Part I contains six articles on general methodology. The topics range from formal methods to the plurality of science. Part II contains six articles on causality and explanation. The emphasis is almost entirely on probabilistic approaches. Part III contains six articles on probability and measurement. The importance of representation theorems for both probability and measurement is stressed. Part IV contains five articles on the foundations of physics. The first three articles are concerned with action at a distance and space and time, the last two with quantum mechanics. Part V contains eight articles on the foundations of psychology. This is the longest part and the articles reflect my continuing strong interest in the nature of learning and perception. Within each part the articles are arranged chronologically. I turn now to a more detailed overview of the content. The first article of Part I concerns the role of formal methods in the philosophy of science. Here I discuss what is the new role for formal methods now that the imperialism of logical positivism has disappeared.

ESSAYS ON THE PHILOSOPHY OF TERENCE HORGAN

Rodopi

WOMEN IN PHILOSOPHY

WHAT NEEDS TO CHANGE?

Oxford University Press Why are professional philosophers today still overwhelmingly male? Often it is assumed that women need to change to fit existing institutions. This book instead offers concrete reflections on the way in which philosophy needs to change to benefit from the important contribution women's full participation makes to the discipline.

STUDIA PHAENOMENOLOGICA IV, 3-4 / 2004

THE OCEAN OF FORGETTING. ALEXANDRU DRAGOMIR - A ROMANIAN PHENOMENOLOGIST

Romanian Society for Phenomenology *Studia Phaenomenologica* 2004, 3-4

UNCORRECTED PAPERS

DIVERSE PHILOSOPHICAL DISSENTS

Prometheus Books These incisive, witty, and completely accessible essays on a wide range of topics by historian of philosophy Wallace Matson admirably demonstrate that philosophy can still be based on careful reasoning and presented with clarity of expression. Against fashionable contemporary views, Matson asserts that philosophy is the most important subject in the college curriculum, because it is the investigation into what rationality is. Getting the answer wrong to the question What does it mean to be reasonable? is the most catastrophic of errors. The motivation for most of the essays in this collection is his perception that this error is being widely committed and that received opinion on many topics is dead wrong. Accordingly, he takes issue with the following beliefs: bodily resurrection is possible; zombies are logically possible (as David Chalmers claims); John Rawls wrote a book on justice; religion is an aid to morality; Zeno and Parmenides tried to prove that nothing really moves; the actual world is only one out of an infinity of possible

worlds; and much more. Also included are two essays on Matson's distinctions between high and low beliefs, four essays on Spinoza, and, in conclusion, The Study of Philosophy as a Prophylactic against Bullshit. Wallace Matson (Berkeley, CA) is professor of philosophy emeritus at the University of California, Berkeley, and the author of A New History of Philosophy, Sentience, and The Existence of God.

MODELS AND METHODS IN THE PHILOSOPHY OF SCIENCE: SELECTED ESSAYS

Springer Science & Business Media This book publishes 31 of the author's selected papers which have appeared, with one exception, since 1970. The papers cover a wide range of topics in the philosophy of science. Part I is concerned with general methodology, including formal and axiomatic methods in science. Part II is concerned with causality and explanation. The papers extend the author's earlier work on a probabilistic theory of causality. The papers in Part III are concerned with probability and measurement, especially foundational questions about probability. Part IV consists of several papers, including two historical ones, on the foundations of physics, with the main emphasis being on quantum mechanics. Part V, the longest part, is on the foundations of psychology and includes papers mainly on learning and perception. The book is aimed at philosophers of science, scientists concerned with the methodology of the social sciences, and mathematical psychologists interested in theories of learning, perception and measurement.

PHILOSOPHY OF PSYCHOLOGY

A CONTEMPORARY INTRODUCTION

Psychology Press Philosophy of Psychology is a well-structured introduction to the nature and mechanisms of cognition and behaviour from one of the leaders in the field.

AN INTRODUCTION TO THE PHILOSOPHY OF MATHEMATICS

Cambridge University Press This introduction to the philosophy of mathematics focuses on contemporary debates in an important and central area of philosophy. The reader is taken on a fascinating and entertaining journey through some intriguing mathematical and philosophical territory, including such topics as the realism/anti-realism debate in mathematics, mathematical explanation, the limits of mathematics, the significance of mathematical notation, inconsistent mathematics and the applications of mathematics. Each chapter has a number of discussion questions and recommended further reading from both the contemporary literature and older sources. Very little mathematical background is assumed and all of the mathematics encountered is clearly introduced and explained using a wide variety of examples. The book is suitable for an undergraduate course in philosophy of mathematics and, more widely, for anyone interested in philosophy and mathematics.

PAST, PRESENT, AND FUTURE POSSIBILITIES FOR PHILOSOPHY AND HISTORY OF EDUCATION

FINDING SPACE AND TIME FOR RESEARCH

Springer On the occasion of the retirement of Paul Smeyers, this book considers the state and status of the philosophy and history of education today. Over the last 20 years, the conditions in which research takes place have changed considerably. They have done so in ways that are often less than favourable to disciplines such as history and philosophy of education, and the space and time for the practices that constitute these disciplines - of reading, of writing, of collegiality - is increasingly under pressure. During this time, the Research Community on the History and Philosophy of Educational Research has convened annually to bring its critical lenses to bear on these emergent conditions and to suggest ways that educational research might, or ought to, be done otherwise. As co-founder and co-convenor of the Research Community, this volume explores and recounts Paul Smeyers' development of Wittgensteinian scholarship and its legacy in education, his formative role in the development of philosophy of education as an international field, his many international collaborations, the "useless" educational-philosophical deepening of concepts, and the wider educational-philosophical import of this. This gives rise to consideration of the failure of these fields to halt the changes in the governance and status of the university that threatens them, and those practices that remain and that are emerging in academia that we wish to protect, to pass on to the next generation of researchers in these fields.

CLASSICAL PHILOSOPHY: PHILOSOPHY BEFORE SOCRATES

Taylor & Francis
