## Soil and Water Conservation News, Vol. 13

### July-August 1992 (Classic Reprint)

*Forgotten Books* Excerpt from **Soil and Water Conservation News, Vol. 13: July-August 1992** Back when I was a kid, Shepherd recalled, there were quite a few black farmers in northeastern Missouri. Then most of the young people went to the cities to go to work. And most of their parents who remained have passed away. Shepherd was born and raised on the land he owns. Now only 1 percent of his fellow farmers in Pike County are black. He believes the reduction is partly due to many black farmers having quit farming as a livelihood. ## Agriculture, Rural Development, and Related Agencies Appropriations for 1982

## Hearings Before a Subcommittee of the Committee on Appropriations, House of Representatives, Ninety-sixth Congress, First Session

# Soil and Water Conservation News, Vol. 10: May, 1989 (Classic Reprint)

*Forgotten Books* Excerpt from **Soil and Water Conservation News, Vol. 10: May, 1989** Rc&d council members are spurring local economies by helping people diversify their interests. They're bringing new and profitable ideas in recreation, tourism, forestry, and farm products. They're solving critical erosion problems for schools and historic sites; cutting flood damage; and helping to improve water quality and quantity, solve waste disposal problems, and improve local emergency assistance. In some areas, rc&d councils are helping to accelerate conservation planning to meet 1985 Farm Bill deadlines. Through local training programs, councils are learning to obtain grants and other resources from private as well as public sources. And councils tell me that obtaining private funding often has a snowball effect. When people in the private sector see the good things rc&d is doing for their communities, they want to be a part of it, too. This is helping councils accomplish even more. # Soil Water Conservation Dynamics and Impact

*MDPI* Human needs like food and clean water are directly related to good maintenance of healthy and productive soils. A good understanding of human impact on the natural environment is therefore necessary to preserve and manage soil and water resources. This knowledge is particularly important in semi-arid and arid regions, where the increasing demands on limited water supplies require urgent efforts to improve water quality and water use efficiency. It is important to keep in mind that both soil and water are limited resources. Thus, wise use of these natural resources is a fundamental prerequisite for the sustainability of human societies. This book collects 15 original scientific contributions addressing the state of the art of soil and water conservation research. Contributions cover a wide range of topics, including (1) recovery of soil hydraulic properties; (2) erosion risk; (3) novel modeling, monitoring and experimental approaches for soil hydraulic characterization; (4) improvement of crop yields; (5) water availability; and (6) soil salinity. This collection provides more insights into conservation strategies for effective and sustainable soil and water management.

## Soil and Water Conservation News, Vol. 11

## November-December 1990 (Classic Reprint)

*Forgotten Books* Excerpt from *Soil and Water Conservation News, Vol. 11: November-December 1990* Within scs, under the President's Initiative to enhance water quality, funding for water quality is million for fiscal year 1990, more than double the previous year. The President's proposal for scs for water quality is million for fiscal year 1991. These funds are for demonstration projects, hydrologic unit areas, regional projects, technology and data base development, and ongoing water quality activities. Agriculture-related, nonpoint source pollution problems are site specific and complex to understand and manage. Because solving them involves numerous agencies at the Federal and State level, usda has promoted coordination and cooperation from the outset. About the Publisher *Forgotten Books* publishes hundreds of thousands of rare and classic books. ## Conservation News

### Soil and Water Conservation News, Vol. 11

## September-October 1990 (Classic Reprint)

*Forgotten Books* Excerpt from *Soil and Water Conservation News, Vol. 11: September-October 1990* Test farmers said that cover crops paid off in the long run with reduced weeds and improved soil moisture retention. Of the cover crops tested on the demonstration sites, some grew rapidly in the fall and most could be planted with no-till drills. And most produced abundant dry matter that lingered well into the cotton season. Only 500 acres of upland cotton were being planted no-till with cover in Mississippi prior to 1987, said Heard. He predicts over acres for 1990. About the Publisher
