Harry's Magic Tables Learn your times tables in as little as a week - magic! Now up to $12 \times$ Times Tables [Gill & Macmillan Ltd](#) Rhymes x pictures = times tables made easy! Nine year old Harry Moraghan never found maths easy. Then he discovered he REALLY hated it when it came to learning multiplication tables So Harry's mum invented an ingenious way of remembering his tables by using rhymes and pictures. In two weeks Harry had all his multiplication tables down pat. Soon after, Harry's teacher gave the class a test. Harry finished it in five minutes and got every question right! News of Harry's Magic Tables spread like wildfire in his school. In no time, the book was shared with some lucky classmates, friends, cousins, and eventually complete strangers too! Now many happy children know their tables inside out - and so can you! Teach Your Child the Multiplication Tables, Fast, Fun and Easy -- Teacher's Editio With Dazzling Patterns, Grids and Tricks! [Createspace Independent Publishing Platform](#) Teach Your Child the Multiplication Tables - Teacher's 2nd Edition Both the Student and Teacher's editions include the TeaCHildMath(tm) teaching methodology. The ONLY difference between these editions is: an Answer Key with pages reduced to 1/4 size can be found at the back of the Teacher's edition. Like most third graders, my son found learning the multiplication tables through rote memorization a challenge. After an afternoon of tiresome drills, I knew there had to be a better way! I drew a grid for tables 1-10. Not surprisingly, Scott knew tables 1, 2, 5 and 10, the tables with easy patterns. Well, then, why not find patterns for the rest of the tables? Tables for EVEN numbers 2, 4, 6 and 8, we discovered, end in some combination of 2-4-6-8-0 and are easy to learn. Tables for ODD numbers, we found, also have distinct patterns. Patterns made Scott smile. He could see the underlying structure and knew he got it right. The traditional method of learning one math fact at a time, such as $8 \times 6 = ?$, is not only difficult but highly inefficient. Rote memorization is passive and mechanical. Students typically find it boring. Why not learn one pattern for the entire table? Discovering patterns is active, creative and engaging. The essence of mathematics is patterns. Learning to recognize patterns at an early age develops analytical skills. Patterns greatly benefit children with special needs, such as those with ADD/ADHD, autism and dyslexia. They can better recall and visualize the table when they see a pattern. This is true for all children. Patterns aid recall. My workbook utilizes both left and right-brain strategies to teach multiplication. There are marked differences between children who are left-hemisphere dominant and those who are right dominant. Whereas the left-hemisphere dominant child can construct the whole from the parts, the right dominant prefers the big picture, seeing patterns and making connections. Special needs children are often right-brain dominant. Learning the multiplication tables is much easier when both hemispheres are engaged. It is the responsibility of parents and teachers to ensure children learn the multiplication tables. Without them, a child will not progress beyond third grade math. Fractions, decimals, percentages and algebra will be beyond a child's reach. In California, the

number one reason students do not graduate from high school is failure to pass algebra. A leading cause is: failure to master the times tables! It is a national disgrace that fifteen-year olds in the U.S. rank near the bottom of industrialized nations in math skills. We must reverse this alarming trend. The time to intervene is in the third grade. Teachers, why not a more effective approach to the multiplication tables than the "drill and kill" of rote memorization? Why not bring the "magic" of math into the classroom? If all third graders were to genuinely like math, they would be more likely to succeed in school. Parents too must do their part. Parents have a huge influence over a third grader. By high school it may be too late. Mastery of the multiplication tables is essential to your child's future. My goal in writing this workbook is not only multiplication mastery for all children but to instill in them a love of numbers and fascination with math. Free instructional TeaChildMath(tm) videos can be found on YouTube. Teach Your Child the Multiplication Tables Teacher's Edition [Infinity Pub](#) TEACH YOUR CHILD THE MULTIPLICATION TABLES, Fast, Fun & Easy with Dazzling Patterns, Grids and Tricks! is an innovative workbook, designed for parents wishing to reinforce classroom teaching or home school their children. Designed for Grades 2 and 3, this circus-themed workbook is also suitable for children with special needs. Unlike conventional methods, this workbook teaches the child to discern patterns among odd and even numbers. Rather than presenting one table at a time, the numerous grids, puzzles and games present each table in context of the others. Your child will learn by doing. Parents and teachers, use this workbook to instill a love of numbers and confidence in math. Fast Easy Way to Learn a Language [John Wiley & Sons](#) Fast, Easy Way to Learn a Language is essential reading for anyone studying a language at school, for business, travel or just for pleasure. Well-known inspirational teacher Bill Handley speaks 15 languages at various degrees of fluency. He is passionate about learning languages and believes language learning should be an adventure. In this book he explains: how to have fun building your vocabulary in record time the easy way to get to grips with grammar why you should use more than one textbook how to use your 'lost time' to learn faster what to do when you feel like giving up how to write your own 'survival skills' course. Fast Easy Way to Learn a Language will have you speaking your new language in no time. The book explores all the important topics: active and passive learning, mastering a differential alphabet, using recorded material, planning your own immersion program, making effective use of the internet and much more. Mastering Multiplication Tables Fun Games and Activities to Play with Your Child Mastering Multiplication Tables - Fun games and activities to play with your child Learning your multiplication tables can often be difficult. Teaching them to your child can be harder still. This book guides you through the process of teaching your child in a fun and stimulating way, so that they will quickly learn and then retain their knowledge. You will initially learn how to teach your child how to understand and learn the times tables through a combination of hands on and visual techniques. Once they have grasped an understanding of each set of number facts, there is a series of 10 games to play to help them to reinforce what they have learnt. Some of these games require little or no preparation. At the end of the kindle edition of the book there is though a link to a series of printable resources that are required to play the others; whereas the paperback version includes them within the book itself. There are also sets of questions on each of the times tables included with the downloadable resources, so that you can check that your child can recall the multiplication facts in a test situation. Once this stage has been completed your child should have a secure understanding of their times tables and be able to use them confidently. Who am I? I am a fully qualified Elementary (Primary) Teacher with over 18 years of experience and a math specialist. All of the techniques and activities in this book are ones that I use in the classroom. Children enjoy them and I know that they work. God and Human Dignity [Wm. B. Eerdmans Publishing](#) The concept of human dignity has been stripped from its traditional context in Christian thought, becoming "a moral trump frayed by heavy use," but a compelling alternate vision has not yet emerged. God and Human Dignity offers a fresh restatement of the nature and scope of human dignity in Christian perspective. Theologians, ethicists, and biblical scholars from around the world here examine the dimensions of human worth in the light of sacred Scripture, doctrine, and ecclesial practice. In contrast to modernity's often monochromatic accounts of human dignity in terms of freedom or rationality, these essays argue that human dignity in Christian perspective is a "many-splendored thing" reflecting humanity's participation in the divine drama of creation, redemption, and new creation. Representing disciplines across the academic spectrum, the essays in God and Human Dignity offer

systematic and scriptural perspectives on human dignity that connect to a host of pressing contemporary issues. Contributors: C. Clifton Black, Russell Botman, Don Browning, J. Kameron Carter, Elaine Graham, Robert W. Jensen, James L. Mays, M. Douglas Meeks, Esther Menn, Peter Ochs, John Polkinghorne, Hans Reinders, Gerhard Sauter, Christoph Schw abel, R. Kendall Soulen, Fraser Watts, Michael Welker, and Linda Woodhead.

100 Ways in 100 Days to Teach Your Baby Maths Support All Areas of Your Baby's Development by Nurturing a Love of Maths [Troubador Publishing Ltd](#) Maths ability on entry to school is the strongest predictor of later academic achievement, double that of literacy skills, and simply saying more number words to babies increases their maths ability. What else have scientists, psychologists and professors learned about maths for babies? Babies seem to be born with an amazing number sense: understanding shapes in the womb, being aware of quantities at seven months old, calculating probability at six months old, and doing addition and subtraction at nine months old. The best time to introduce maths is infancy. By the time children enter school there is already a significant gap in maths skills, this gap increases over time. A parent's attitude shapes a child's attitude. Parents have the power to teach their babies that learning maths can be either something to feel anxious about or something to enjoy. Babies can learn maths while boosting all other areas of development. For example, movement is boosted while teaching geometry positional language, literacy is boosted while reading a "number" book, and bonding is boosted by giving a baby undivided attention while teaching maths to him or her. Maths is important. Babies will use maths every day for the rest of their lives. What about the impact of gender, culture, videos, sleep, diet—even the type of pushchair you buy? 100 Ways in 100 Days to Teach Your Baby Maths holds the answers.

Times Tables the Fun Way Book for Kids Memorization of the multiplication facts is fun and easy with this colorful and clever book of cartoons and stories. Children learn to associate the numbers with the characters in the story. To teach 4x4, the story tells about Bart who loves to go hang gliding and can't wait until he turns 16 so he can get his driver's license and drive his 4 by 4. Children easily remember once the story is learned. The caption below the story says: Remember: you have to be 16 to drive a 4x4. There are cartoons and stories for all the difficult facts, ie. the 3's, 4's, 6's, 7's, and 8's. Tricks are used to teach the easier ones ie. 1's, 2's, 5's, and 9's. Kids love the stories and will never forget "You have to be 16 to drive a 4 by 4, (4x4). Over 500,000 copies have been sold to schools in the US since 1992.
