## Clinical Insights into Homeopathy & Remedies

**Page Publishing Inc Homeopathy is an alternative, complementary, cost effective, and very safe Healing System for infants to old-age. During early period of 20th century, it was practiced parallel to the conventional (allopathic) System. It is widely practiced in Germany, UK, India, Bangladesh, and Pakistan. The classical books on Homeopathy, published before the 1900s, describe often in obsolete medical terms, the theory, philosophy and symptoms of provings (drug testing). They are deficient in application methods to find the correct homeopathic remedy easily. They have little reference to pathological changes in tissues. In practice, different patients express their symptoms in different words, even though suffering from same disease. It is often difficult to find the correct homeopathic remedy, based on the patient's symptoms alone. K. Robinson, MD, a contemporary expert, wrote in an editorial The Cutting Edge, "I suppose, the overwhelming drive in the practice of homeopathy is toward precision in prescribing. Because the accurate prescribing is so difficult, we find ourselves studying constantly, and yet we never feel complete." (J.A.I.H, vol. 79, #1, March, 1986). This book, Homeopathy in Practice - Clinical Insights into Homeopathy and Remedies, offers the practical aspects, and clinical keynotes on remedies related to various illnesses, backed by successful reports, from journals, books, personal discussions and experiences of others. This book will help to find the correct remedy easily. Just refer to the relevant Heading in the Contents. Go to the associate page(s), and glance through the keynotes of remedies. You will often spot the correct homeopathic remedy.**

## Herbal Medicine in India

## Indigenous Knowledge, Practice, Innovation and its Value

**Springer Nature** This book highlights the medical importance of and increasing global interest in herbal medicines, herbal health products, herbal pharmaceuticals, nutraceuticals, food supplements, herbal cosmetics, etc. It also addresses various issues that are hampering the advancement of Indian herbal medicine around the globe; these include quality concerns and quality control, pharmacovigilance, scientific investigation and validation, IPR and biopiracy, and the challenge that various indigenous systems of medicine are at risk of being lost. The book also explores the role of traditional medicine in providing new functional leads and modern approaches that can offer elegant strategies for facilitating the drug discovery process. The book also provides in-depth information on various traditional medicinal systems in India and discusses their medical importance. India has a very long history of safely using many herbal drugs. Folk medicine is also a key source of medical knowledge and plays a vital role in maintaining health in rural and remote areas. Despite its importance, this form of medicine largely remains under-investigated. Out of all the traditional medicinal systems used worldwide, Indian traditional medicine holds a unique position, as it has continued to deliver healthcare throughout the Asian subcontinent since ancient times. In addition, traditional medicine has been used to derive advanced techniques and investigate many modern drugs. Given the scope of its coverage, the book offers a valuable resource for scientists and researchers exploring traditional and herbal medicine, as well as graduate students in courses on traditional medicine, herbal medicine and pharmacy.

## Global Report on Diabetes

**"Diabetes is a serious, chronic disease that occurs either when the pancreas does not produce enough insulin (a hormone that regulates blood sugar, or glucose), or when the body cannot effectively use the insulin it produces. Diabetes is an important public health problem, one of four priority noncommunicable diseases (NCDs) targeted for action by world leaders. Both the number of cases and the prevalence of diabetes have been steadily increasing over the past few decades. Globally, an estimated 422 million adults were living with diabetes in 2014, compared to 108 million in 1980. The global prevalence (age-standardized) of diabetes has nearly doubled since 1980, rising from 4.7% to 8.5% in the adult population. This reflects an increase in associated risk factors such as being overweight or obese. Over the past decade, diabetes prevalence has risen faster in low- and middle-income countries than in high-income countries. Diabetes caused 1.5 million deaths in 2012. Higher-than-optimal blood glucose caused an additional 2.2 million deaths, by increasing the risks of cardiovascular and other diseases. Forty-three percent of these 3.7 million deaths occur before the age of 70 years. The percentage of deaths attributable to high blood glucose or diabetes that occurs prior to age 70 is higher in low- and middle-income countries than in high-income countries. Because sophisticated laboratory tests are usually required to distinguish between type 1 diabetes (which requires insulin injections for survival) and type 2 diabetes (where the body cannot properly use the insulin it produces), separate global estimates of diabetes prevalence for type 1 and type 2 do not exist. The majority of people with diabetes are affected by type 2 diabetes. This used to occur nearly entirely among adults, but now occurs in children too."--Page 6.**
