Lights of Revelation and the Secrets of Interpretation This single volume contains the Arabic edition, English translation and notes by Dr. Gibril Fouad Haddad of 'Abd Allah b. 'Umar b. Muhammad b. 'Ali al-Baydawi's first hizb of *Anwar al-Tanzil wa-Asrar al-Ta'wil* (The Lights of Revelation and the Secrets of Interpretation). As a revised and improved version of al-Zamakhshari's landmark *Tafsiral-Kashshaf*, *Anwar al-Tanzil* contains the most concise analysis of the Quranic use of Arabic grammar and style to date and was viewed early on as a foremost demonstration of the Qur'an's essential and structural inimitability (*i'jaz ma'nawi wa-lughawi*) in Sunni literature. *Anwar al-Tanzil* is important and significant, because of its fame and influence. In Dr. Haddad's own estimation, this work "became and remained for seven centuries the most studied of all Tafsirs," and it is to be regarded as "the most important commentary on the Qur'an in the history of Islam." **Practical Engine Airflow Performance Theory and Applications** CarTech Inc The efficient flow of air through an engine is instrumental for

producing maximum power. To maximize performance, engine builders seek to understand how air flows through components and ultimately through the entire engine. Engine builders use this knowledge and apply specific practices and principles to unlock horsepower within an engine; this applies to all engine types, including V-8s, V-6s, and imported 4-cylinder engines. Former Hot Rod magazine editor and founder of Westech Performance Group John Baechtel explains airflow dynamics through an engine in layman's terms so you can easily absorb it and apply it. The principles of airflow are explained; specifically, the physics of air and how it flows through major engine components, including the intake, heads, cylinders, and exhaust system. The most efficient and least restricted path through an engine is the key to high performance. To get to this higher level, the author explains atmospheric pressure, air density, and brake specific fuel consumption so you understand the properties of fuel for tuning. Baechtel covers the primary factors for optimizing the airflow path. This includes the fundamentals of air motion, air velocity, and boundary layers; obstructions; and pressure changes. Flowing air through the heads and the combustion chamber is key and is comprehensively explained. Also comprehensively explored is the exhaust system's airflow, in particular primary tube size and length, collector function, and scavenging. Chapters also include flowbench testing, evaluating flow numbers, and using airflow software. In the simplest terms, an engine is an air pump. Whether you're a professional engine builder or a serious amateur engine builder, you must understand engine airflow dynamics and must apply these principles if you want to optimize performance. If you want to achieve ultimate engine performance, you need this book. Aeneas Tacticus, Asclepiodotus, Onasander Aeneas was perhaps a general, and certainly author of several didactic military works of which the sole survivor is that on defence against siege. From it we can deduce that he was a Peloponnesian of the fourth century BCE who served in the Aegean and in Asia Minor and composed the work from direct knowledge and from oral and some literary tradition, possibly in 357-6 BCE. It is devoted entirely to defence of fortified places and deals specially with use of defending troops; defensive positions; morale; resistance to attacks and to actual assault; guards; obviation of treachery and revolution; and other subjects. Asclepiodotus, philosopher and pupil of the Stoic Posidonius, wrote a rather dry but ordered work on Tactics as if a subject of the lecture room, based not on personal experience but on earlier manuals. His main subjects were the branches of a military force; infantry; cavalry; chariots; elephants; arms; maneuvers; military evolutions; marching formation. The work ends with words of command. Onasander (Onasandros), a Platonic philosopher, dedicated his work "The General" to the Roman Veranius, who was a consul in 49 CE. The work deals in plain style with the sort of morals and social and military qualities and attitudes expected of a virtuous and

militarily successful general. It is also concerned with such matters as his choice of staff; attitude to war; religious duties; military formations; conduct in allied and hostile lands; difficult terrains; camps; drill; spies; guards; deserters; battle formations and maneuvers; and other matters, ending with conduct after victory
